

DESIGN AND DEVELOPMENT OF A WEB-BASED MANAGEMENT SYSTEM

Member Records, Registration, and Fee Tracking

1. Login and Secure Access

- Open the AIPGE system in a supported web browser.
- Go to the Admin Login page.
- Enter the authorized username.
- Enter the corresponding password.
- Select Login.
- After successful log in the admin trator are open

5. Dashboard

The Dashboard is the starting point for monitoring system activity. It presents:

- Monthly Collection Trend – visualizes collection activity across months.
- Member Status – summarizes active, inactive, and pending members.
- Quick Insights – highlights notable activity such as the most active month, top payer, and pending growth.
- Recent Payments – shows latest payment activity.

- Quick Actions – provides shortcuts such as Add Member, Add Payment, and View Analytics.

2.Payment and Fee Tracking

The Payments module is used to review member payments and track fee collections. The interface separates totals by category and provides search and month-filter controls.

Review payments

- Open Payments from the left navigation.
- Use Search member to find payments for a particular member.

- Use Filter by month to narrow activity.
- Review Total, Retirement, Benefits, and Admin amounts.
- Check Recent Payments for member, amount, and date.
- Use the Members panel to review member-related records.

Record a payment

- Use Add Payment from the Dashboard or the relevant payment action.
- Select or identify the correct member.
- Enter the payment amount and applicable category/details.
- Verify the date and member information.
- Save the payment.
- Return to Payments and confirm the payment appears in totals and recent activity.

Best practice: Record payments immediately after verification and avoid duplicate entries. For corrections,

use the system's approved editing/reversal process rather than creating an unexplained second entry.

3. Funeral Assistance

The Funeral Assistance module provides a dedicated view for cooperative contributions and assistance releases. It includes summary totals, a monthly ledger, and death-event records.

Summary cards

- Total Contributions – total recorded contributions related to the assistance fund.
- Total Released – total assistance amount released.

- Balance – remaining balance based on recorded contributions and releases.

Monthly Ledger

The Monthly Ledger provides a period-based view of deaths, active members, collected amounts, projected fund, released amounts, and balance. Use Search month to locate a specific period.

Add a death event

- Select Add Death Event.
- Identify the affected member and enter required event information.
- Review active-member count and assistance amount.
- Save the event and verify it appears under Death Events.
- Confirm that the related ledger and released amount are reflected correctly.

Because assistance records affect financial balances, verify member identity and the approved release amount before saving.

4. Analytics and Reports

Analytics provides a visual summary of financial and membership activity.

- Total Revenue
- Payments
- Active Members
- Pending Balance
- Weekly Payments chart
- Member Status visualization

Use Analytics to identify trends and support administrative review. Treat analytics as a summary layer

and use Payments or Members to verify individual records.

6.Member Registration and Member Records

The Members module is the primary area for maintaining the cooperative member directory.

Open the Members module

Select Members from the left navigation menu. The page displays total members, active members, inactive members, a search field, and the Member Directory.

Register a new member

- Select Add Member.

- Complete the required member information presented by the registration form.
- Review spelling, contact details, identifiers, and status.
- Submit/save the record.
- Return to the Member Directory and confirm the new member appears.

Note: The supplied screenshot shows the Add Member entry point but not the registration form itself. Field names and required fields should follow the actual form displayed by the deployed system.

Search and review members

- Use the search box to locate a member by name, member ID, or status.
- Use Reset Search to clear the current search.
- Review member status and membership date before related payment or assistance actions.

Keep records current when member details change

Recommended Operating Workflow

Step	Activity	Purpose
1	Login	Authenticate using authorized administrator credentials.
2	Dashboard check	Review collection trends, member status, and recent activity.
3	Member records	Register new members and update/search existing records.
4	Fee tracking	Record and verify payments, then review monthly totals.
5	Assistance	Record approved death events and verify assistance releases.
6	Analytics	Review trends and summary indicators.
7	Verification	Cross-check important totals and recent transactions.
8	Logout	End the session securely.

Data Quality and Security Practices

- Use complete and accurate member information.
- Verify member identity before recording a payment or assistance event.

- Review monetary values before saving transactions.
- Use month filters and summary cards to reconcile collection totals.
- Limit administrator access to authorized personnel.
- Do not expose passwords or leave authenticated sessions open on shared computers.
- Use edit/update functions for corrections whenever available.
- Keep an approval process for financial releases and assistance payments.
